

Crystal 73™ Lighting Glass

Rugged, durable...that is AFG Lighting Glass. This amazing low-iron glass product offers maximum light transmission with minimum absorption but can be used for any number of applications--just like our other glass patterns. Abrasion-resistant and non-combustible, our glass is specially designed for commercial lighting applications.

Crystal 73™ lighting glass effectively blends transmitted light down to the work area. And, best of all, AFG glass doesn't "yellow" over time like plastic. Our lighting glass panels can also be tempered for added protection against thermal differences and mechanical stress.

Crystal 73™

Lighting Glass effectively blends transmitted light down to the work area.
